

AWS Assignment

Goal

The goal of the assignment is to give us insight on how you solve problems and what kind of choices you make when designing services in AWS.

For the assignment we have a couple options for you

Option - 1

Be creative and show a demo of your own cool stuff in AWS

OR (The assignment below)

Option - 2

This assignment consists of building a message delivery feature that could send updates to users and also keep track of the updates sent for later processing.

Requirements

- Create an API to post a message which can be delivered to a recipient via sms/email and keep a record of it
- Create an API to retrieve the messages sent to a particular recipient

Optional

- Think about how you can secure the above feature

You are done !

- Push your code in Github and share the link with us before the interview (a couple of days before the interview would be optimal)
- Give us a cool demo during the interview and we are looking forward to meet you !

P.S

We value your time and hence we don't expect you to spend more than few hours on the given problem
